- › Customizable for you

DRY FEEDERS

The popular Chore-Time Dry Feeders are outstanding feed management tools for feeding simplicity and efficiency. Whether you need nursery, wean-finish or finish feeders, all have been designed to lower labor costs in clean-out and feeder adjustment time as well as to help prevent feed waste.

Customizable for you

- > Single-sided and double-sided feeder models available.
- > Feeders can be used in the center of the pen or as fence-line feeders.
- > Custom sizes are available to better match the feeder to your needs.

Designed for durability

- > Feeders are made from durable 304 Series stainless steel for long life.
- > Trough lip heights are sized for better pig access to feed – 4.13 inches (105 mm) on finisher and wean-finish models and 5.31 inches (135 mm) on finisher models.
- > Feed saver lip on feed trough and the use of trough divider bars or solid divider panels helps to prevent feed waste as pigs eat.
- > Metal edges are safety hemmed to minimize exposure.
- > Double-hemmed end cap corners and trough edge strengthens high wear areas.

***Two linear inches of feed trough space per pig for optimal performance**

Nursery feeder with u-shaped bar guard divider.

Wean-finish feeder with solid divider panels.

Finisher feeder with bar divider.

V-shaped bottom directs feed-clogging moisture away from the feed dispensing area.
