## SHELF FEEDERS

DESIGNED FOR OPTIMAL FEEDING

- › Wet/Dry Feeder
- › Optimal feed access
- › Easy to maintain

# SHELF FEEDERS

This heavy duty Chore-Time Shelf Feeder provides optimal feed access for your pigs. Constructed with 304 Series stainless steel to resist corrosion and takes the abuse provided by pigs. The removable water tube makes for a quick clean-up and easy service.

## Optimal feed access

- › This double-sided wet/dry shelf feeder offers improved average daily gain rates.
- › Pigs can eat feed directly from the elevated shelf or mix their feed with water in the feeder pan space below the shelf.
- › Solid divider panels in feed trough reduce waste and increase durability.
- › Added headroom allows larger pigs to stand and eat more naturally.
- › Stainless steel water pipe feeds EDSTROM™ high quality nipples and provides one nipple per feed space.\*
- › The Chore-Time Shelf Feeder can be customized to fit center-pen or fence-line feeding configurations.
- › Custom designs available.

\* EDSTROM™ trademark is not owned or licensed by CTB.

## Easy to maintain

- › Feeder is constructed with heavy duty 16 and 18 gauge 304 Series stainless steel with tight hemmed edges.
- › Tight hemmed edges, with no gap, make the feeder easier to clean and minimizes where bacteria can hide and grow.
- › Double-hemmed end cap corners and trough edge strengthens high wear areas.
- › The unique design of the pan area helps to keep smaller pigs from getting trapped behind the nipple or between feeding sides.
- › Fewer parts mean fewer maintenance issues.
- › Trough divider foot design features open arch at base for easier feeder clean-up.
- › Multiple holes and knockouts simplify installation.
- › Only four nuts to remove the water pipe assembly.
