

FANTURA CEILING INLET SYSTEM

BANISH COLD AIR DROP
IN YOUR HOUSE

- Always enough fresh air in every part of your house
- Accurate minimum ventilation for healthy animals
- Excellent seals for years of reliable operation

FANTURA CEILING INLET SYSTEM

Fancom offers a unique ceiling inlet that ensures a constant, uniform supply of fresh air throughout the house, even in extremely wide buildings. It effectively eliminates cold air dropping onto your animals, so they stay in good health and grow better. In addition, the consistent and even growth conditions improve uniformity. The Fantura ceiling ventilation system consists of a ceiling inlet, an intelligent actuator and smart control computer.

Always enough fresh air in every part of your house

When a conventional ceiling inlet is set to the minimum ventilation position, a long, narrow opening is created. The cold, incoming air has too little mass, and its flow speed decreases too rapidly so it drops onto the animals. A special jetstream is formed by the Fantura air inlet valve's compact, rectangular opening. The compact jet of incoming air has a better throw so that all the animals in the house can benefit from sufficient supplies of fresh air. The system works automatically, which eliminates the need to close the inlets manually. This saves time and prevents errors.

Accurate minimum ventilation for healthy animals

The unique V-shaped inlet directs the fresh air so that up to 80% flows horizontally along the ceiling. This air can mix better with the air already in the house and helps to prevent temperature fluctuations. This not only has the effect of saving energy, but also means the animals experience fewer drafts. There are fewer respiratory problems and the growth performance of the animals is better.

Excellent seals

The aerodynamic housing reduces air resistance and increases the capacity while allowing the number of ceiling inlets to be

reduced. The ceiling inlet is well-insulated and has excellent seals to help eliminate condensation and the inconvenience of frozen inlets. You can rely on your ventilation system to provide years of trouble-free operation.

Intelligent actuator motor

The Fantura System works in combination with the Fancom climate computer and the intelligent iM.60 or iM.125 actuators. The system is easy to install. Depending on the capacity needed, the actuator determines the optimum position of the Fantura ceiling inlet, taking into account the changing shape of the air inlet opening and the inlet position to create an optimal climate in your house.
