

CHORE-TIME[®]

FEED BIN AUTOMATIC BIN SLIDE ACTUATORS

EFFECTIVE SINGLE or
TANDEM BIN OPERATION

- › Enhance biosecurity
- › Prevent feed outage
- › Improve animal welfare
- › Save labor

FEED BIN BOOT SLIDE ACTUATORS

CHORE-TIME® Automatic and Manual Feed Bin Boot Slide Actuators allow pig producers to easily operate their single or tandem bin system's boot shut-off slides. Both versions feature a reliable design that provides simple, trouble-free operation.

Enhance Biosecurity

- > Disease prevention is critical. The Automatic Boot Slide Actuator helps to reduce the risk of disease being introduced when workers exit and re-enter the barn when switching feed bins.

Help Prevent Feed Outages

- > Out-of-feed events occurring during the 109-day grow-to-finish cycle are known to reduce overall gain by 11.3 lbs (5.13 kg).
- > The Automatic Boot Slide Actuator reduces the risk of having feed outage events and will pay for itself by eliminating just one random out-of-feed event, while helping to reduce ulcers and incidences of ileitis.

Labor Cost and Time Savings

- > Cost and time savings are greatly improved by eliminating the need to exit the barn to manually switch the bins. The Automatic Boot Slide Actuator provides the ability to remotely switch the bins from inside the barn or make the change automatically.
 - > The Automatic Boot Slide Actuator uses a 24-volt DC motor.
 - Low voltage.
 - No electrical inspection needed.
 - Reduces wiring cost.
 - > The Boot Slide Actuator works with contactless limit switches.

Single Boot Slide Actuator

Chore-Time PigCentral™ Control and Automatic Boot Slide Mobile App

- > The next full feed bin is always just a button push away. The PigCentral™ Control will open the next bin and automatically close the previous one for full cleanout capability.
- > The PigCentral Control mobile app can be used to remotely operate the bin boot slides and watch for out-of-feed alerts.

PigCentral™ Control

Chore-Time Automatic Boot Slide Control

- > The Chore-Time Automatic Bin Boot Slide Control can operate up to four bin boot slides.
- > An indicator light provides the ability to easily know if the auto bin boot slide is open or closed.
