

Classic Free-Access Gestation Stall

SOW GESTATION STALLS

FREE-ACCESS SOW GESTATION STALLS

- › Helps keep sows in good condition
- › Solutions for animal space requirements
- › Proven design backed by years of experience

GESTATION STALLS

PigTek's Free-Access Gestration Stalls are for sow producers who want to take their sow management to a higher level while also using compliant solutions for the changing rules for animal space requirements. This housing for sows is based on PigTek's years of European pig production experience. The products are engineered to offer pig producers practical retrofit or new construction solutions for today's pig production challenges.

What You Need to Know

- Free-access stalls allow sows to exercise and stay in good condition by freely walking in and out of individual stalls.
- These animal-friendly gestration stalls feature an advanced, quietly operating self-catch system that helps to reduce animal stress.
- In free-access mode, when sows enter the stall, the door automatically closes behind them to provide privacy for eating. Sows release themselves by simply backing up to trigger the release latch. The door then opens automatically.
- Sows can be temporarily locked into the stalls to aid breeding and pregnancy scanning and are able to be released individually or by groups.
- Design is backed by years of experience in European pig production.

Product Features

- Each stall includes an integrated drop feeding system.
- Feeding trough features solid stainless steel partitions to help reduce sow competition when eating.
- The front of the gestration stall is designed to discourage sows from stepping into the feed trough and wasting feed.

Classic Free-Access Gestration Stall

- The back of the stall is shaped to save barn space and to aid with insemination procedures.
- Stalls are available in galvanized steel for durability and low maintenance.
- System can be used in new or retrofitted to existing production facilities.
- Thoroughly-tested and functional for both sows and staff.

The connection rod between the front and rear gate on the Classic Free-Access Gestration Stall has an integrated spring helping to prevent injuries to sows and damage to gates.

Swing-Fix Gestration Stall

The Swing-Fix Gestration Stall is an alternative to the Classic Free-Access Stall. The Swing-Fix Stall's central lock and release function works with a block of stalls or with individual stalls. Producers can also update the back gate on existing conventional gestration stalls with the Swing-Fix Gate to help meet new animal space requirements.
